

Photo Kiosk details

Our photo Kiosk can do a multitude of things, often limited by your own creativity.

It does the usual job of printing 6 x 4, 6 x 8 and 6 x 9 photos. In addition to these, individual photos can be adjusted by cropping, brightening, red eye reduction and addition of words or titles.

Our machine also prints **postcards** in the above sizes mentioned. There is a selection of various borders that can be added to the photo. e.g. A wedding "Thank you".

The Kiosk can read media from all known formats. Eg. Camera cards SD, SD mini etc, USB sticks, CD's, DVD's, and Bluetooth enabled devices (phones or PDA's).

Want to archive or share your photos with others? No problems the Kiosk can archive or store your photos from your memory cards onto CD for future use or sharing with others. The CD itself has an auto loading **photo viewer** in which you can view your photos on the CD and other photos on your computers as well.

Our photo kiosk can also transfer your photos to a **DVD format** which is put in a slide show with a music track added, so that you can view the show on any computer with a DVD drive or any of the DVD recorders or players that are used for standard playing of DVD's.; A great way to share photos with others who have a DVD at home.
